

“INTRODUCING THE MOST PRECISE AND HUMANE EUTHANASIA SYSTEM”

THE TBJ MODEL REM-1 IS THE ONLY PATENTED MULTI-STEP EUTHANASIA SYSTEM FOR SMALL ANIMAL SUBJECTS

TBJ's Multi-Step Euthanasia System has been developed on the principles of maximizing narcosis while minimizing duress. The TBJ Euthanasia System insures the most humane process available while completely automating the procedure.

Using our controlled carbon dioxide euthanasia system, small animal subjects can be terminated in a safe and humane manner. This unique process offers push button control with reliable and consistent results every time. The process is automatic and can be completed in four minutes.

Multiple TBJ Euthanasia Systems can be operated simultaneously together to maximize the productivity of your necropsy suite. Ideal for the University and Research settings, these compact units can be installed virtually anywhere.

- Step One: Places the correct amount of CO2 into the cage without the subject detecting the change.
- Step Two: Sets the wait time for the species being euthanized. The controlled combination of the first and second steps maximizes narcosis control while minimizing duress.
- Step Three: Quickly injects CO2 to bring the chamber to a virtually 100% uninhabitable environment.
- Step Four: Wait time to insure irreversible euthanasia.

- Each step is performed automatically by the push of a button.
- Total process is complete in approximately four minutes.
- CO2 is not wasted during the process. The process uses only the CO2 required in an effective and controlled system.
- Dosage is controlled and contained in the cage with a pre-determined volume to properly utilize the narcotic properties of carbon dioxide.

TBJ's Patented Euthanasia Systems Utilize Safe & Controlled CO2 Emissions in an Accurate and Measurable Environment.

TBJ's Push Button Control System Regulates Each Step of the Euthanasia Process

TBJ Offers Compact CO2 Flow Systems in a Controlled Work Environment

Contact TBJ today for a quote on your euthanasia system. We can design an ergonomic facility that suits your exact needs.
